**Motor Assessment Scale (E DAY)**

**SECTION 1**

| Supine to side-lying onto intact side (starting position: supine with knees straight) | **Uses intact arm to pull body toward intact side. Uses intact leg to hook impaired leg to pull it over.** |
|---|---|

**SECTION 2**

| Supine to sitting over side of bed | **Pt may be assisted to side-lying and is assisted to sitting but has head control throughout.** |
|---|---|

**SECTION 3**

| Balance sitting | **Pt sits unsupported with weight shifted forward and evenly distributed over both hips/legs. Head and thoracic spine extended.** |
|---|---|

**SECTION 4**

| Sitting to standing | **Pt stands up. Remains standing for 5 seconds with hips and knees extended with weight evenly distributed.** |
|---|---|

**SECTION 5**

| Walking | **Walks 33 feet or 10 meters without assistance or a device. Is able to pick up a small object from the floor with either hand and walk back in 25 seconds.** |
|---|---|

**SECTION 6**

| Upper arm function | **Standing: Have patient's affected arm abducted to 90 degrees with palm flat against wall. Patient must maintain arm position while turning body toward the wall.** |
|---|---|

**SECTION 7**

| Hand movements | **Have the patient pick up a polystyrene cup with their affected hand and put it on the table on the other side of their body without any alteration to the cup.** |
|---|---|

**SECTION 8**

| Advanced hand activities | **Have the patient pick up a pen/pencil with their affected hand, hold the pen as for writing, and position it without assistance and make rapid consecutive dots (not strokes) on a sheet of paper. Goal: at least 2 dots a second for 5 seconds.** |
|---|---|
