Setting up your PKI token for use with Trinity

1 Overview
2 Hardware and Software requirements
3 How to view your PKI Token from within the Trinity Software

Overview

This guide will instruct you on setting up your Referral client software to use your PKI token. You will need to install your PKI token before proceeding with the install of the Referal Client.

Hardware and Software requirements

Note:

Make sure you have your PKI token or Smartcard installed before you install the Medical-Objects Referral Client (Trinity). Otherwise the Trinity will not recognise your PKI.

Locate your PKI token or Smartcard and follow the instructions specific to that key.

This can involve installing Drivers and Safe Sign software from the CD sent to you by Medicare.

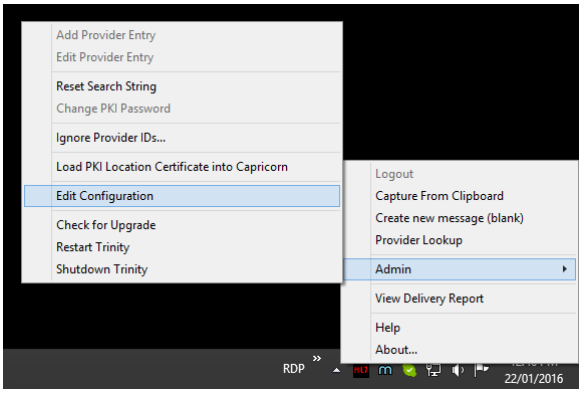
ikey 2000 or 2032(USB) or PKI Token	GenPC Twin or Smart Card(USB)

Note:

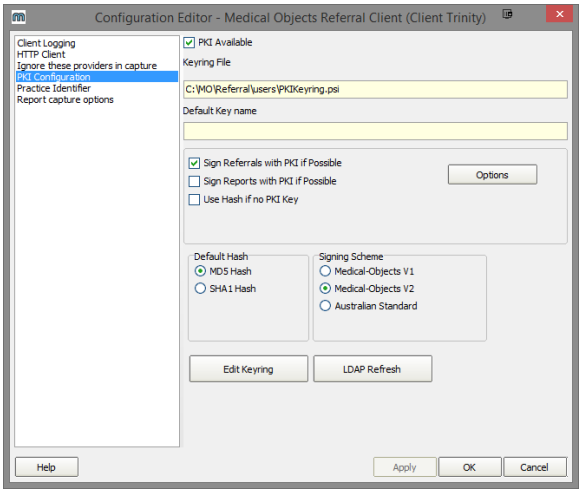
If you do not have a PKI token or a Smart Card, You can apply for one at the **Medicare Website.**

How to view your PKI Token from within the Trinity Software

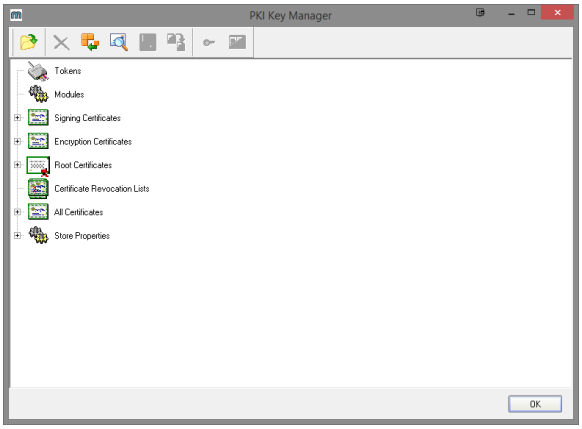
1. Right click the Trinity icon and select **Admin,** and **Edit Configuration.**



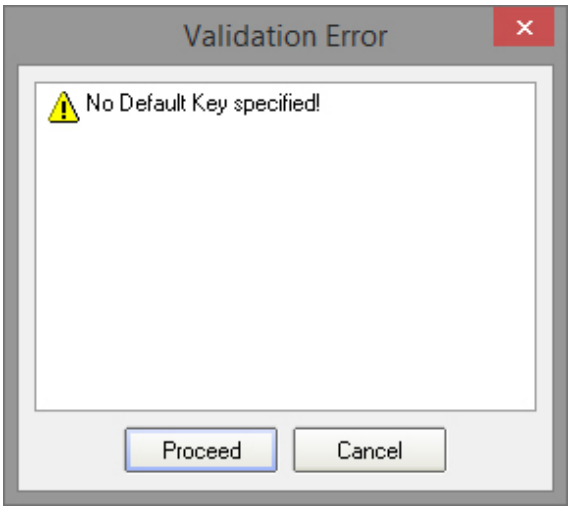
2. The following window will appear. Select **PKI Configuration** in the left panel.



3. Click the **Edit Keyring** button. The following window will appear.



4. The PKI token or Smartcard will appear under **Tokens** displaying the doctor's name.
5. Click **OK** to close the window. The following window will appear.



6. Click **Proceed.**
7. Click **OK** on the **Configuration Editor** window to complete the installation.

Note:

If the PKI key is not listed, shutdown Trinity, make sure the PKI key is detected by windows and restart Trinity.
