Exporting Patient Details for use with NTS

Overview:

If you require any assistance with the installation or configuration, or if you have any questions, please contact the Medical-Objects Helpdesk on (07) 5456 6000.

If you have not Installed the Medical-Objects Download client, Please see the guide for Installing Capricorn on Windows.

Configuring Capricorn Software

Accessing the Capricorn Configuration Window

In some cases, the Capricorn may be configured as a service. See this guide for instructions on how to launch the Capricorn if it is set up as a service.

- To launch the HL7 Tray application, Go to Start Menu, All Programs, Medical-Objects and select the Medical-Objects Capricorn. Alternatively, You can go to C:\MO\Capricorn and run the Capricorn.exe.
- 2. The following icon will appear in the tray. Double click on it to bring up the log window.

3. When the log window is displayed, Click on the **Configuration** icon highlighted below, or select **Utility** and select **Configuration**.

Capricorn Configuration Settings

Choose Manage Queues from the left hand Panel. Select Add, and enter a queue name. For this example we will use EMDAT DEMOGRAPHICS with the base directory set to C:\MO\EMDAT QUEUE.

Note: The directory is never used but it cannot be empty. 1 Overview: 2 Configuring Capricorn Software 2.1 Accessing the Capricorn Configuration Window 2.2 Capricorn Configuration Settings 3 SQL Server settings

SQL Server settings

1. Go to your SQL server and login. Find the name of your server (In this instance **Server\SQLExp ress).** Also note the name of the mspdata database for Practix as this may change.

2. Go back to your Medical-Objects program and select the queue you created and press the setup button. One in the sub window Add the modifiers as listed in the screenshot below.

Choose **Practix** as your practice software. Tick the **Patients** checkbox. Set the **SQL Server Name** as you recorded in step 1. Set the **Database Name** as you recorded in step 1.

4. Exit out of the Medical Objects configuration.

Switch to NTS Shadowlink and click on the "Service Settings" button.

5. Go to the "Patient Data" tab and then the "Batch Files" tab.

Set the File Format at Format 3. Set your save path as per step 3.

Exit out of the Shadowlink setup and choose to restart the service if it asks.
