

# Show the ADL, XML and HL7 for LOINC panel archetype

## Overview

Show the underlying archetype representation in ADL and XML, and also the rendition into HL7 v.2.

- 1 [Overview](#)
- 2 [Example : Geriatric Depression Scale LOINC panel](#)

## Example : Geriatric Depression Scale LOINC panel

All the tagged archetype state and functionality is stored in the archetype/template's underlying XML format. It can also be exported to Archetype Definition Language (ADL) v. 1.2. Further, populated instances (archetypes templates that have data in them) are saved to HL7 v.2 messages in the production version of the Template Editor.

To consider an example, the Template Editor saves the Geriatric Depression Scale LOINC panel to the following XML:

(This example has GELLO removed to simplify things a little)
