Overview

Explorer is a messaging system, a Filing system, a word processing system and a label maker all rolled into one.

The software allows you to send and receive electronic messages using HL7 messaging standards which are sent using PKI and PGP (Pretty Good Privacy) encryption.

Explorer has the capability to send referrals and specialist letters using templates or simple text messages. Explorer can interoperate with all popular practice management software including Medical Director (2 & 3), Genie, Best Practice to name but a few. And using our image servers you can even import images captured by endoscopes.
